DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a turbofan engine, classified in class 60, subclass 226.1.
 - II. Claim 5, drawn to a noise attenuator, classified in class 431, subclass 114.
 - III. Claims 6-13, drawn to a turbojet engine, classified in class 60, subclass 39.183.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and III together and invention II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because: 1) invention I must draw fan air while invention II must draw ambient air, and invention III does not need the high speed flow of invention II to rotate the ejector. The subcombination has separate utility such as a noise attenuator for a boiler or a rocket stand.
3. Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In

the instant case the different inventions I and III cannot be used together because a turbofan and a turbojet can only be used in the alternative. In addition, a turbofan and a turbojet have different modes of operation, the turbojet combustion using all the air that passes through the inlet of the engine, while the turbofan is combusting only part of the air that passes through the inlet of the engine, the remaining part by-passing the "core" apparatus that comprises the combustion chamber.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper, and applicant is required to elect for examination one of the inventions, either I or II or III.
